

# THE REVIEW OF PHYSICAL CHEMISTRY OF JAPAN

Founded in 1926 by Dr. SHINKICHI HORIBA,

Professor Emeritus, M. J. A.,

President

## CONTENTS

|                                                                                                                                                                  |     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Kiyoshi Shimizu: Effect of Hydrostatic Pressure on Ionic Conductivity of Silver Chloride.....                                                                    | 73  |
| Kazuo Inoue: The Strength of Single Crystals of Inorganic Salts under High Pressure, III.....                                                                    | 80  |
| Kazuo Inoue: The Strength of Single Crystals of Inorganic Salts under High Pressure, IV.....                                                                     | 85  |
| Masahiro Ōura: Effects of Plastic Deformation on the Properties of Scintillation of NaI (TI)                                                                     |     |
| Crystal .....                                                                                                                                                    | 92  |
| Sueo Nomura: Mechanism of Grain Boundary Corrosion of Aluminium in High Temperature Water .....                                                                  | 100 |
| Shigeto Kitahara: The Solubility of Quartz in Water at High Temperatures and High Pressures .....                                                                | 109 |
| Shigeto Kitahara: The Solubility of Quartz in the Aqueous Sodium Chloride Solution at High Temperatures and High Pressures .....                                 | 115 |
| Shigeto Kitahara: The Solubility Equilibrium and the Rate of Solution of Quartz in Water at High Temperatures and High Pressures .....                           | 122 |
| Shigeto Kitahara: The Polymerization of Silicic Acid obtained by the Hydrothermal Treatment of Quartz and the Solubility of Amorphous Silica.....                | 131 |
| Kazuo Monobe: Studies on the Electrochemical Properties of Copolymers of Maleic Acid, I Potentiometric Titration at Low Ionic Strength.....                      | 138 |
| Kazuo Monobe: Studies on the Electrochemical Properties of Copolymers of Maleic Acid, II Potentiometric Titration at High Ionic Strength .....                   | 145 |
| Kazuo Monobe: Studies on the Electrochemical Properties of Copolymers of Maleic Acid, III On the Difference of Titration Behaviors due to Comonomer Species..... | 155 |
| Kazuo Monobe: Studies on the Electrochemical Properties of Copolymers of Maleic Acid, IV Comparison of Chelate Formation Constant .....                          | 162 |

THE PHYSICO-CHEMICAL SOCIETY OF JAPAN

# THE REVIEW OF PHYSICAL CHEMISTRY OF JAPAN

(Butsuri-Kagaku no Shinpo)

Committee for the edition :

**Editor in chief :** Wasaburo Jono

**Editors :** Rempei Goto, Eiji Suito, Jiro Osugi

**Secretary :** Hiroshi Teranishi

**Communications to the Editor** should be addressed to Editorial Committee, The Physico-Chemical Society of Japan, College of Science, Kyoto University, Kyoto, Japan.

**Business Correspondences** should be addressed to: Committee on Publication, The Physico-Chemical Society of Japan, College of Science, Kyoto University, Kyoto, Japan.

**Purchase Order** should be addressed to: Maruzen Co., Ltd., Nihonbashi, Chuo-ku, Tokyo, Japan.

## BETTER CHEMICALS FOR A BETTER LIFE

Backed by many years of practical experience in the synthesis of ammonium sulphate and urea, TOYO KOATSU now ranks amongst the biggest fertiliser producers of the world. Its world-wide exports are ever on the increase.

The success of the TOYO KOATSU synthetic urea process is now acclaimed throughout the world.

Various TOYO KOATSU synthetic resins are used for industrial materials and articles of modern living;

its numerous industrial chemicals are employed in many fields such as solvents, detergents, pigments, materials for synthetic resins & plastics and synthetic fibre, and pharmaceuticals. Thus TOYO KOATSU products are the prop and stay for the industry of Japan.

Moreover, the company has succeeded in preparing a new polyurea fibre URYLON which has the advantages of both nylon and terylene. Now it is on the way towards industrialisation.

Enquiries are cordially invited for all the TOYO KOATSU products.

**Main products;** Urea, ammonium sulphate, calcium superphosphate, methanol, formaldehyde, acrylonitrile, sodium cyanide, synthetic resins (urea, melamine, polyester, styrene-acrylonitrile copolymer) & other chemicals.
